

Architecture: Matrix/grid with different viewpoints

Structure: SWOT analysis, stakeholder matrices, risk assessments, balanced

scorecards, quadrant models

Value: Forces systematic consideration of blind spots Note: Effectiveness depends on facilitation quality

Architecture: Sequential phase-based workflow

Structure: Meeting agendas, workshop runsheets, project methodologies, training

curricula

Value: Structure for unpredictable conversations

Note: Time-boxing effectiveness varies by group/problem

Architecture: Evaluation grid with criteria and scoring

Structure: Scoring rubrics, vendor selection matrices, feature prioritisation grids,

MoSCoW frameworks

Value: Makes implicit decision factors explicit Note: Scoring will be subjective; but useful framing

Architecture: "What if" exploration

Structure: Pre-mortems, contingency planning templates, assumption testing

frameworks, stress testing protocols

Value: Expands models beyond current constraints Note: Not predictions; value lies in thinking exercise

Architecture: Collaborative template

Structure: Team charters, service level agreements, working agreements, social

contracts, partnership MOUs

Value: Creates explicit shared understanding Note: Agreements will reflect moment in time

Architecture: Menu of participation options and formats

Structure: Meeting formats library, participation guidelines, communication protocols

Value: Accommodates diverse human preferences Note: Psychological safety cannot be guaranteed

Architecture: Documentation framework with standards

Structure: Post-project reviews, lesson learned databases, best practice repositories

Value: Preserves thinking for future application Note: Templates capture form not essence

Architecture: Narrative flow map with temporal stages

Structure: User story maps, customer journey maps, process flows, roadmaps,

experience mapping

Value: Reveals progression patterns and relationships Note: Maps will only represent current understanding
